Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int floorSearch(int arr[], int low, int high, int x) {
    if (low > high)
        return -1;

    if (arr[low] > x)
        return -1;
    int mid = (low + high) / 2;

    if (arr[mid] <= x) {
        if (mid == high || arr[mid + 1] > x)
            return mid;
        return floorSearch(arr, mid + 1, high, x);
    } else {
        return floorSearch(arr, low, mid - 1, x);
    }
}

int main() {
    int n;
    scanf("%d", &n);

    int arr[n];
    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);

    int x;
    scanf("%d", &x);

    int idx = floorSearch(arr, 0, n - 1, x);

    if (idx == -1)
        printf("-1\n");
    else
        printf("%d\n", arr[idx]);

    return 0;
}
